

Assignment - javascript

Course ID: 6958ff259ce8510d1a67c66b

Generated: 1/3/2026

Due Date: 1/10/2026

Questions: 5

Type: DESCRIPTIVE

DESCRIPTIVE QUESTIONS (10 Questions):

Here are 5 descriptive questions about creating an assignment titled "Create descriptive assignment about: javascript - javascript":

1. How should the assignment be structured to encourage students to not only write functional JavaScript code but also to critically describe their design choices, the challenges they faced, and the solutions they implemented?
2. What specific JavaScript concepts, paradigms (e.g., functional, OOP, asynchronous), or modern features should be central to the assignment to ensure a comprehensive understanding, and how should these be presented in the prompt to facilitate student description?
3. Beyond the executable code itself, what additional deliverables (e.g., a detailed technical report, a guided walkthrough video, annotated code comments, a presentation) should be required to ensure students articulate their understanding and decision-making process effectively?
4. What scaffolding or guiding questions can be embedded within the assignment prompt to help students delve deeper into explaining their code's rationale, potential improvements, alternative approaches considered, and the reasoning behind their final choices?
5. How will the grading rubric differentiate between the functional correctness and efficiency of the JavaScript code and the quality, depth, and clarity of the student's descriptive analysis of their solution, including their reflection on the learning process?
