

Assignment - Big Data

Course ID: 695902849ce8510d1a67ca99

Generated: 1/3/2026

Due Date: 1/10/2026

Questions: 5

Type: DESCRIPTIVE

DESCRIPTIVE QUESTIONS (10 Questions):

Here are 5 descriptive questions about Big Data:

1. How do the defining characteristics of Big Data (Volume, Velocity, Variety, Veracity, and Value) collectively challenge traditional data management systems and analytical methods, necessitating a fundamental paradigm shift in how organizations perceive and utilize information?
2. Describe how Big Data analytics is being leveraged across diverse industries (e.g., healthcare, retail, finance) to drive innovation, optimize operational efficiency, and create personalized experiences for customers and users. Provide specific examples for at least two industries.
3. What are the significant ethical and privacy concerns that arise from the collection, analysis, and use of vast quantities of personal and behavioral data in the era of Big Data? Discuss potential societal implications and propose measures or regulations that can be implemented to mitigate these risks.
4. Explain the architectural shifts and technological innovations (e.g., distributed computing frameworks like Hadoop/Spark, NoSQL databases, real-time processing tools) that have emerged to effectively store, process, and analyze Big Data sets that far exceed the capabilities of conventional database systems.
5. Beyond mere operational efficiency, how does Big Data serve as a critical strategic asset for organizations, enabling predictive capabilities, fostering data-driven decision-making, and shaping future business models in an increasingly competitive global market?
