

Assignment - Cloud

Course ID: 695e8d3d45a22f4a2472f4af

Generated: 1/7/2026

Due Date: 1/14/2026

Questions: 5

Type: DESCRIPTIVE

DESCRIPTIVE QUESTIONS (10 Questions):

1. How would you define a cloud in the context of computing, and what are the key characteristics that differentiate cloud computing from traditional on-premises IT solutions?
2. Describe the various types of cloud services (IaaS, PaaS, SaaS) and provide examples of how each type is utilized in real-world scenarios.
3. Discuss the benefits and challenges associated with migrating to a cloud-based infrastructure, including factors such as scalability, cost-effectiveness, security, and data management.
4. Explain the concept of cloud storage and its significance in modern data management practices. Compare and contrast different cloud storage providers and their respective features.
5. How do cloud computing and virtualization technologies work together to optimize resource utilization and enhance flexibility in IT environments? Provide examples of how virtualization is leveraged within cloud infrastructures to achieve efficient operations.
