

Assignment - Cloud

Course: 696a4e333d411e225b6b2017

| Due Date: 1/23/2026

Questions: 5 | Total Marks: 50

Type: Descriptive Questions

QUESTIONS:

Q1. Explain the concept of cloud computing and its key characteristics.

[10 Marks | Difficulty: medium]

Expected Points:

- Definition of cloud computing
- Scalability
- On-demand self-service
- Resource pooling

Q2. Discuss the different service models in cloud computing and provide examples for each.

[10 Marks | Difficulty: medium]

Expected Points:

- Infrastructure as a Service (IaaS)
- Platform as a Service (PaaS)
- Software as a Service (SaaS)
- Examples for each model

Q3. Explain the benefits and challenges of adopting cloud computing for businesses.

[10 Marks | Difficulty: medium]

Expected Points:

- Benefits such as cost savings and scalability
- Challenges like security concerns and data privacy
- Impact on business operations
- Strategies to mitigate challenges

Q4. Describe the key components of a cloud architecture and how they interact to deliver services.

[10 Marks | Difficulty: medium]

Expected Points:

- Components like virtualization, networking, storage
- Interactions between components
- Service delivery mechanisms
- Scalability considerations

Q5. Compare and contrast public, private, and hybrid cloud deployment models, highlighting their differences and use cases.

[10 Marks | Difficulty: medium]

Expected Points:

- Definition and characteristics of each deployment model

- Differences in ownership and access
- Use cases for public, private, and hybrid clouds
- Considerations for selecting the appropriate model
