

Assignment - AI

Course: 696a8e19f5be9cad65b9f73a

| Due Date: 1/23/2026

Questions: 5 | Total Marks: 50

Type: Descriptive Questions

QUESTIONS:

Q1. Explain the concept of machine learning in the context of AI. Provide examples of machine learning algorithms and their applications.

[10 Marks | Difficulty: medium]

Expected Points:

- Definition of machine learning
- Examples of machine learning algorithms (e.g., decision trees, neural networks)
- Explanation of applications (e.g., image recognition, natural language processing)

Q2. Discuss the difference between narrow AI and general AI. Provide real-world examples to illustrate each type.

[10 Marks | Difficulty: medium]

Expected Points:

- Definition of narrow AI and general AI
- Examples of narrow AI (e.g., virtual assistants) and general AI (e.g., self-driving cars)

Q3. Examine the ethical considerations in AI development and deployment. Discuss potential biases and ways to mitigate them.

[10 Marks | Difficulty: medium]

Expected Points:

- Explanation of ethical considerations in AI
- Discussion on biases in AI systems (e.g., racial bias in facial recognition)
- Strategies to mitigate biases (e.g., diverse training data)

Q4. Describe the difference between supervised and unsupervised learning in AI. Provide examples of tasks suitable for each type of learning.

[10 Marks | Difficulty: medium]

Expected Points:

- Definition of supervised and unsupervised learning
- Examples of tasks for supervised learning (e.g., spam email detection)
- Examples of tasks for unsupervised learning (e.g., clustering customer segments)

Q5. Explain the concept of reinforcement learning in AI. Provide a detailed example of how reinforcement learning is used in a specific application.

[10 Marks | Difficulty: medium]

Expected Points:

- Definition of reinforcement learning
- Detailed example of reinforcement learning application (e.g., training a robot to play games using rewards and penalties)
